

Data Quality

A DATIS Tip Sheet

What is Data Quality?

Data quality is a means for your organization to understand whether the information you record is accurately reflecting the work you do and the services you're providing.

Think of it this way, **the story of your organization is created by your data**. If the data isn't accurate then the story won't describe what you've accomplished and the services you provide correctly.

Data Quality isn't Easy!

DATIS recognizes that this process is time-consuming and can be challenging so we have created several tools in the Knowledge Base that can help you.

[The Data Clean-up & Final Reporting Dates Fiscal 2016-17](#)

What are the Data Quality Reviews?

The data quality reviews are a service that DATIS provides to your organization. They provide valuable feedback on the data you've submitted during the last fiscal. Keep in mind, data omitted can't be rated and will not reflect the work your agency has done.

We also encourage feedback from you.

Please have your Catalyst System Administrator reach out to DATIS.
